

NETYS RT

1.1 to 11 kVA

OBJECTIVES

The aim of these specifications is to provide:

- the information required to choose the correct uninterruptible power supply for a specific application.
- the information required to prepare the system and installation site.

The specifications are intended for:

- installation engineers.
- design engineers.
- engineering consultants.

INSTALLATION REQUIREMENTS AND PROTECTION

Connection to the mains power supply and load(s) must be implemented using cables of suitable size, in accordance with current standards. If not already present, an electrical control station which can isolate the network upstream of the UPS must be installed. This electrical control station must be equipped with a circuit breaker (or two, if there is a separate bypass line) of an appropriate rating for the power drawn at full load.

If an external manual bypass is required, only the model supplied by the manufacturer must be installed.

We recommend fitting two metres of unanchored flexible cable between the UPS terminals and the cable anchor (wall or cabinet). This makes it possible to move and service the UPS.

For detailed information, see the installation and operating manual.

1. ARCHITECTURE

1.1 RANGE

NETYS RT is a full range of high performing UPS systems designed to:

- ensure 24/7/365 availability and business continuity for datacentre infrastructure,
- avoid data losses and downtime of company operations,
- reduce the electrical infrastructure's total cost of ownership,
- adopt a sustainable development approach.

Models								
Rated power (kVA)	1100	1700	2200	3300	5000	7000	9000	11000

NETYS RT parallel or 1+1					•	•	•	•
NETYS RT Hot Swap						•		•
Matrix table for model and k	VA power rat	ing						

Each family has been specifically designed to meet the demands of loads in specific application contexts, in order to optimise product features and facilitate integration within the system.

2. FLEXIBILITY

2.1 POWER RATINGS FROM 1,1 TO 11 kVA

Dimensions				
Cabinet type		Width (W) [mm]	Depth (D) [mm]	Height (H) [mm]
	1100	89	332	440
	1700 2200	89	430	440
	3300	89	608	440
	5000 7000	89	430	440
	9000 11000	89	565	440
	7000 MBP	178	665	440

11000 MBP	750	440
--------------	-----	-----

The equipment has been designed with a minimum net and gross footprint (the actual space occupied by the unit and the space required around it for maintenance, ventilation and access to operating mechanisms and communication devices). All of the control mechanisms and communication interfaces are located in the upper front section.

The intelligent design also provides easy access for maintenance and installation.

The air inlet is on the front, with outflow to the rear.

2.2 PARALLEL

NETYS RT enables 1+1 parallel and redundant configurations to maximise the availability of critical utilities (up to 22 kVA).

2.3 RELIABILITY

Reliability is the most critical factor for any UPS solution designed to protect and manage the continuity of activities and services.

NETYS RT MTBF exceeds the market standard, and Socomec officially declares its MTBF data

2.4 FLEXIBLE BACK-UP TIME

Different back-up times are possible by using models with internal battery or external battery cabinets.

Batteries are installed on acid-proof trays and connected by means of polarised connectors to facilitate their maintenance.

To guarantee maximum back-up time availability and battery life, the NETYS RT series is equipped with an EBS (Expert Battery System).

Use the following charts to select the UPS model in relation to power and back-up time.

4.3 RECOMMENDED PROTECTION

RECOMMENDED PROTECTION DE	VICES -	Input ⁽¹⁾							
Rated power (kVA)	1100	1700	2200	3300	5000	7000	9000	11000	
Phase in/out	1/1								
C curve circuit breaker (A)	8	13	1	6			-		
D curve circuit breaker (A)			_		5	0	8	60	

RECOMMENDED PROTECTION DEVICES - Input residual current circuit breaker ⁽²⁾											
Rated power (kVA)	1100	1100 1700 2200 3300 5000 7000 9000 11000									
Phase in/out		1/1									
Input residual current circuit breaker	0,03 A type A 0,1 A type A										

RECOMMENDED PROTECTION DEVICES - Output ⁽³⁾											
Model	1100	1700	2200	3300	5000	7000	9000	11000			
Phase in/out		1/1									
Short-circuit inverter current (A) (when AUX MAINS is not present)	10.7	23	23	44	65	80	120	130			
B curve circuit breaker ⁽³⁾ (A)			-	≤10							

CABLES - Maximum cable section										
Model	1100	1700	2200	3300	5000	7000	9000	11000		
Phase in/out	1/1									
Rectifier terminals (flexible cable)/(rigid cable) mm²	IEC320- C14	IEC320-C20			6	3	1	0		
Battery terminals (flexible cable)/(rigid cable) mm²				conn	ector					
Output terminals (flexible cable)/(rigid cable) mm²	6xIEC320 C13		KIEC320 C x IEC320 C		6		1	0		

⁽¹⁾ Rectifier protection should only be considered in the event of separate inputs. The bypass protection is given by recommendation. When the bypass and rectifier inputs are combined (common input), the general input protection rating must be whichever is the highest (bypass or rectifier).

⁽²⁾ Must be selective with residual current circuit breakers downstream of the UPS connected to the UPS output. If the bypass network is separate from the rectifier circuit, or in the event of a parallel UPS configuration, use a single residual current circuit breaker upstream of the UPS.

⁽³⁾ Selectivity of distribution after the UPS with inverter short-circuit current (short-circuit with AUX MAINS not present). The rating of the protection can be increased by "n" times downstream of a parallel UPS system, with "n" equal to the number of parallel modules.

5. REFERENCE STANDARDS AND DIRECTIVES

5.1 OVFRVIFW

The equipment, installed, used and serviced in accordance with its intended use, its regulations and standards, its manufacturer instructions and rules, is in compliance with the relevant Union harmonisation legislation:

LVD 2014 / 35 / EU

DIRECTIVE 2014/35/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 26 February 2014, on the harmonisation of the laws of the Member States relating to the making available on the market of electrical equipment designed for use within certain voltage limits.

EMC 2014 / 30 / EU

DIRECTIVE 2014/30/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 26 February 2014, on the harmonisation of the laws of the Member States relating to electromagnetic compatibility.

RoHS 2011/65/EU

Directive 2011/65 of the European parliament and of the council of 8 June 2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment

5.2 STANDARDS

5.2.1 SAFETY

EN 62040-1 Uninterruptible Power System (UPS) - Part 1: General and safety requirements

IEC 62040-1 Uninterruptible Power System (UPS) - Part 1: Safety requirements (CB scheme by TÜV)

5.2.2 ELECTROMAGNETIC COMPATIBILITY

EN 62040-2 Uninterruptible Power System (UPS) - Part 2: Electromagnetic compatibility (EMC) requirements (tested and verified by third party)

IEC 62040-2 Uninterruptible Power System (UPS) - Part 2: Electromagnetic compatibility (EMC) requirements

5.2.3 TEST AND PERFORMANCE

EN 62040-3 Uninterruptible power systems (UPS). Methods of specifying the performance and test requirements

5.2.4 ENVIRONMENTAL

IEC 62040-4 Uninterruptible Power System (UPS) - Part 4: Environmental aspects - Requirements and reporting

5.3 SYSTEM AND INSTALLATION GUIDELINES

When carrying out electrical installation, all the above standards must be observed. All national and international standards (e.g IEC60364) applicable to the specific electrical installation including batteries must be observed. For further information refer to 'Technical specifications' chapter in the user manual.
