## Safety enclosures

## Normal atmospheres

 steel enclosure from 50 to 1600 A

## Function

Safety enclosures equipped with SOCOMEC switches provide emergency breaking, breaking for mechanical maintenance and safety isolation in the vicinity of any low voltage final circuit.

## Advantages

## Operator safety

- Protects operators against accidental startup of machines.
- Ease of operation without risk of error for unqualified operators.
- Maximum security for all types of simple mechanical and electrical maintenance operations.

## Quick and easy implementation

The space available within the enclosure and the dimensions of the closing plates facilitate connection.

## Durability

The product is designed for harsh industrial environments with mechanical risks or nonexplosive dust risks.

## Operating continuity

- Local disconnection: only the targeted machine is switched off, the rest of the installation can continue operating.
- Reduced costs related to production downtime.

Inductive load breaking (AC23)
Safety enclosures are designed for use with inductive loads and are able to make and break on-load (AC23).

## The solution for

## Strong points

> Operator safety
> Quick and easy implementation
$>$ Operating continuity
$>$ Inductive load breaking (AC23)

## Compliance with standards

$>$ IEC 60364
$>$ IEC 60947-3
$>$ IEC 60204-1
$>$ IEC 61439-2

## Specific requirements

> SOCOMEC can offer you customised solutons to meet your specific requirements.
Contact your Socomec office for further information.

## General characteristics

## Enclosure

The robustness of the safety enclosure is ensured by its 2 mm thick sheet steel construction. Corrosion protection is provided by a $70 \mu \mathrm{~m}$ thick polyester powder coating (RAL 7035). The door is hinge-mounted ( $120^{\circ}$ opening) and is secured with a key lock ( 8 mm square key). The enclosure has an IP65 degree of protection. 4 stainless steel retaining brackets delivered with the enclosure.

## Switching device

Steel safety enclosures are equipped with visible break SOCOMEC load break switches. They make and break under load and provide safety isolation for any low voltage electric circuit. Separation of the contacts is visible through the triplex window, located on the enclosure door, providing guaranteed isolation to the operator. A mechanical indicator, linked directly to the operation of the contacts, is also provided to give clear position indication.

## Operating handle

The safety enclosure is equipped with an unpainted metal operating handle which is used for both normal and emergency cut-off operations. The handle can be locked with up to 3 padlocks with a diameter of between 4 and 8 mm .
As an alternative to the standard metallic handle, a red plastic handle with a metal padlocking lever, or a red metallic handle, can be factory fitted on request.

## Double locking

Double locking prevents the opening of the enclosure door with the switch in its closed position and the closing of the switch when the door is open; with the use of a tool, authorised personnel can
 bypass this system when the door is open for maintenance purposes.
The locking system comprises a single guard moulded from zamak (aluminium alloy) with a simple and robust mechanism driven directly by the handle's operating shaft.

## Auxiliary control

A removable plate, located below the enclosure's operating handle, is supplied for the installation of auxiliary controls.
Several wiring combinations are available as pre-installed or customer-fit options.

## Connections

Two removable (top and bottom) gland plates facilitate cable entry and connections. Cables connect directly onto switch power terminals for enclosures $\leq 160$ A; for $\geq 200 \mathrm{~A}$ incoming cables connect to descending copper bars.

## Miscellaneous

A reversible grounding point enables the termination of earth connections inside and/or outside of the enclosure.
All active parts are covered to avoid direct contact.

(1) For top/bottom connection please contact us.
(2) For front operation please contact us.
(3) Without pre-break option.
(4) Power values are given for information only, the current values vary from one manufacturer to another

## Accessories

## Terminal connection kit for 125 and 160 A enclosures

Use
Power terminal connection kit for 125 and 160 A safety enclosures. Allows you to connect up to $2 \times 35 \mathrm{~mm}^{2}$ cables or $1 \times 70 \mathrm{~mm}^{2}$ cable per pole. Supplied with terminal separation screens and cables for connection to the switch (for onsite installation).

Normal atmospheres steel enclosure from 50 to 1600 A

## Accessories (continued)

## Auxiliary contacts

Use
For pre-breaking and signalling of positions 0 and I of the load break switch.

## Mounting

- On the double-locking system.
- Possibility of factory mounting within the enclosure.

$2^{\text {nd }} \mathrm{NO} / \mathrm{NC}$ AC for pre-break

## Auxiliary control interface from 50 to 1600 A

## Use

For machine control.

## Mounting

- Pushbuttons are wired to terminal block, with 2 onsite connection points. 2 NO/NC auxiliary contacts for pre-break are provided with one utilised in all control options; the $2^{\text {nd }}$ contact is not pre-wired and is available for use.
- The removable interface plate is mounted on the right side of the enclosure below the operating handle.
- Factory installation or customer fit options are available.
