

FUSERBLOC BS88 Rear

Fuse combination switches with rear connection
from 32 to 400 A

fuser_740.eps

The solution for

- > Data centre
- > Healthcare
- > Industry
- > Building

Strong points

- > Connection flexibility
- > Optimum safety
- > High breaking capacity
- > Multi-use
- > Simplified use

Conformity to standards

- > IEC 60947-3
- > IEC 60269-1
- > IEC 60269-2

Available on request

- > Multipolar Fuserbloc with various coupling possibilities such as: 3 x 400 A + 3 x 50 A with front or side operation

Function

FUSERBLOC BS88 Rear units are fuse combination switches with rear connection and right frontside manual control which are available in various connection combinations.

They provide make and break on load, safety disconnection and overcurrent protection for any low voltage electrical circuit.

This range includes versions for direct and external operation, 3 and 4 poles and up to 400 A.

Advantages

Connection flexibility

Fuse combination switches can combine the various types of connections:

- rear/rear (R/R),
- front/rear (F/R)

This flexibility simplifies separation between control, switching and connection spaces while reducing the required space of the overall solution.

Optimum safety

Double phase breaking (upstream and downstream of the fuse) and fully visible isolation keep people and equipment protected from overcurrent.

High breaking capacity

High breaking capacity fuses (100 kA rms) provide protection from overloads and short circuits.

Multi-use

The unit can be equipped with front or side operation handle, mounted directly on the product, or outside, with the possibility of installing it on the door or on the side of an electrical box or cabinet.

Simplified use

The TEST position enables testing of the control circuits without turning on the power thanks to the use of U-type auxiliary contacts. In the TEST position, the cabinet door can be opened.

General characteristics

- For fuses up to 400 A.
- Up to 690 VAC.
- Up to 100 kA.
- Available in 3P or 4P versions.
- Connection types: R/R and F/R.

FUSERBLOC BS88 Rear

Fuse combination switches with rear connection
from 32 to 400 A

What you need to know

- In addition to the FUSERBLOC rating, product selection also depends on the fuse characteristics and functional specifications, which need to be in accordance with the application. SOCOMEC FUSERBLOC are available for utilisation with **BS88 fuses**.

1. FUSERBLOC switch fuse
2. External front or side operation handle
3. U type auxiliary contact (pré-break and switch position signalling)
4. S and ST auxiliary equipment control and switch position signalling contacts
5. Melted fuse mechanical detection and indication device (DDMM)
6. Top and bottom terminal shrouds
7. Integrated solid neutral link
8. Electronic fuse monitoring device (FMD) detects worked fuse and provides signals to operator, PLC or supervision systems. Compatible with BS88, DIN and UL fuse types.
 - LED visual indication
 - Bi-stable relay for PLC: alarm, remote device tripping, etc.
 - TEST button: any time functional product verification
 - FUSERBLOC direct mounting, either back plate, DIN-rail or door mounting
9. Direct control handle.

Visuel non contractuel.

DAM_fuser_702_a_2_cat.eps

For ratings 32 to 400 A, the flat mounting kit provides a compact solution ideally suited to withdrawable applications.

U-type auxiliary contacts⁽¹⁾

Use

Compact universal type auxiliary contacts which can be configured for operation in either, or both, ON and TEST positions for CD 20 to 1250 A FUSERBLOC. Each slot can accommodate up to two interlocked A/Cs.

Connection to the control circuit

By terminals with max. section 2 x 2.5 mm².

For FUSERBLOC CD 20 to 400 A: Pre-break and signalling of positions 0, I and TEST.

For FUSERBLOC ≥ 630 A: Pre-break and position 0 and I signalling.

fuser_314_a_1_cat

Electronic fuse monitoring device (FMD)

Use

Provides fuse state monitoring and worked fuse indication even for fuse links without monitoring device
strikers. Suitable for use with BS88, DIN and UL type fuses.

Principle

The Fuse Monitoring Device (FMD) detects the
worked fuse and provides a signal via:
a relay and a bi-stable relay and 3 LEDs (FMD30).

The FMD can be DIN rail or back plate mounted
close to the Fuserbloc, directly mounted on the
FUSERBLOC, or it can be door mounted to provide
information directly on the front of a panel.
