and technical manuals.

Compatible with COUNTIS P44, COUNTIS P44-RGW and COUNTIS P44-2QCT/P44-4QCT

- Fits within a 92mm² cutout
- Detachable fascia to access screw terminals from the front
- Quick installation

This Door Mounting Kit offers a simple solution for installing COUNTIS P energy meters, ensuring an easy integration into panels.

Specification

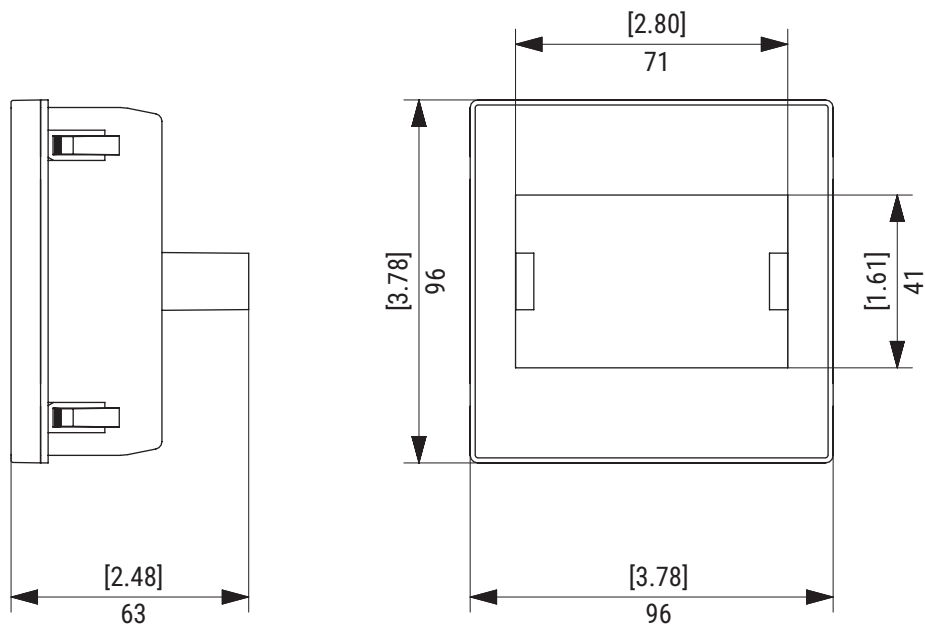

This kit makes it easy to install COUNTIS P meters—normally mounted on a DIN rail—directly on the door of an electrical panel.

The kit includes two separate parts, which makes installation fast and simple.

The front plate is separate so that the electrical terminals at the front of the meter stay accessible, even after the meter is installed in the panel. This means you can easily connect the wires or make changes without having to remove the meter.

After the wiring is done, you can clip on the front plate. It has a 96 x 96 mm opening, so the screen of the meter is visible through the panel. You can still use all functions and view all data while the meter is fixed in place with the accessory.
