

MODULYS RM GP

up to 4 x 25 kVA/kW

Rack-mounted modular UPS system, Green Power 2.0 range

ULTIMATE

Fault tolerant power
without compromise

Socomec Resource Center
To download, brochures, catalogues
and technical manuals

1. OBJECTIVES

The aim of these specifications is to provide the information required to prepare the system and installation site.

The specifications are intended for:

- installation engineers,
- design engineers,
- engineering consultants.

Please contact us for further information, or if you would like to receive a full documentation package for detailed product know-how, including schematics, integration instructions, technical data sheets, user's manual, etc.

1. ARCHITECTURE

1.1. Range and flexibility

MODULYS RM GP is a 3-phase modular UPS system designed for 19" rack integration. The product is easy to integrate and install, as well as being very simple to operate and maintain. It provides maximum power availability and protection in a compact design that leaves free space for other rack mounted devices.

MODULYS RM GP:

- provides easy and fully-assured rack integration to meet all requirement across multiple applications, even for existing installations;
- simplifies and optimises every step of the integration process - from sizing to installation, including the logistics, making project management easy, risk-free and economic;
- provides reliable power whilst ensuring optimum load protection even during power upgrades or maintenance procedures.

Pre-cabled rack with maintenance bypass

M4-R-075-82B0 15U rack, 4 slots
M4-R-050-82B0 9U rack, 2 slots

Plug-in boards

1C-CP-OP-ADC+SL Programmable IN / OUT dry contact + serial link
1C-CP-OP-MODTCP MODBUS TCP interface
NET-VISION7CARD NET VISION card, WEB / SNMP interface IPV4 / IPV6

Other options

NET-VISION-EMD Environment temp. and humidity sensor + 4 dry contacts
1C-OP-P-TEMP External temperature sensor

Blank panel

M4-OP-SSC Cover for empty slot

Power module - 25 kW

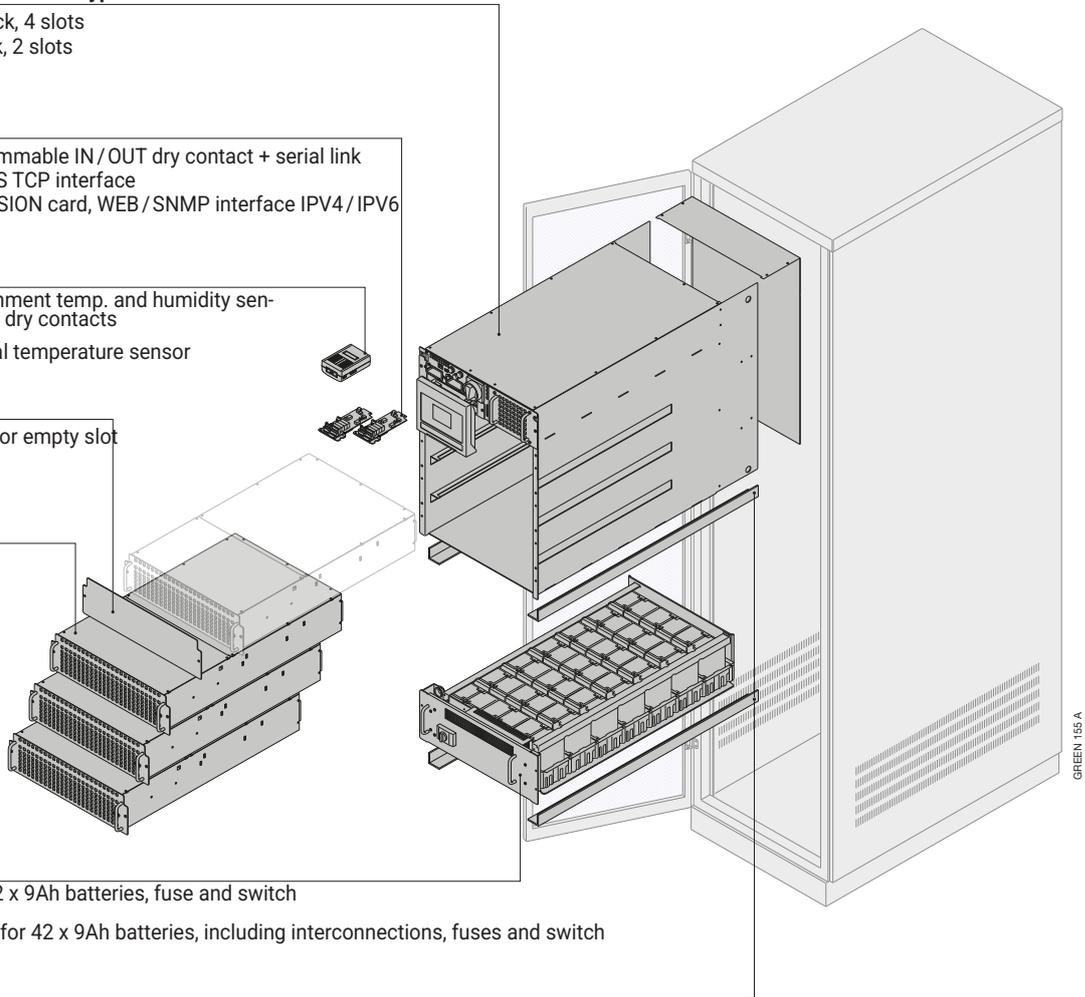

M4-RI-25

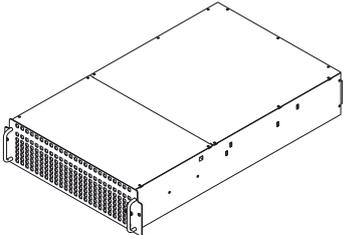

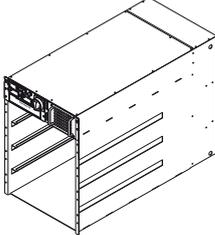

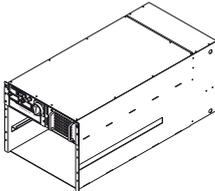

4U battery rack

M4-BR-009L With 42 x 9Ah batteries, fuse and switch
M4-BR-009L-B Empty, for 42 x 9Ah batteries, including interconnections, fuses and switch

Mounting accessories

M4-RI-OP-RAIL Adjustable rails for rack mounting support

CONFIGURATIONS AND RATED POWER (KW)

	1+1 redundancy	-	25	-	-
M4-R-050-82B0					

1.2. Flexible back-up time

Different extended back-up times are possible by using: (1) 4U rack-mounted battery modules; (2) a modular battery cabinet; (3) a high capacity battery cabinet.

Each battery pack comprises an acid-proof container designed to prevent damage in case of acid leakage.

Each Power Module has a powerful embedded battery charger able to provide up to 8 A (without power derating).

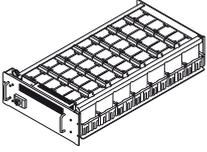

A special Power Module with extra battery charger inside is available when very long back-up times are required.

MODULYS RM GP is compatible with different battery technologies.

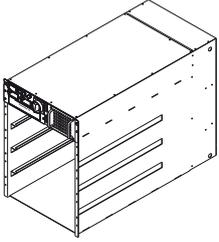

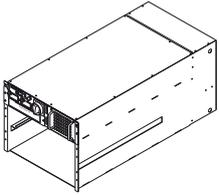

BATTERY BLOCK DYNAMICS ⁽¹⁾		
Sealed lead-acid	Min	108 + 108
	Max	144 + 144
Open vented (flooded lead-acid)	Min	108 + 108
	Max	144 + 144
Nickel Cadmium	Min	180 + 180
	Max	228 + 228

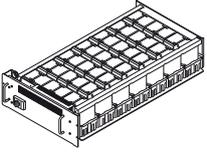

(1) 2 strings/3 cables configuration (+ N -).

1.2.2. Modular hot-swap battery cabinet

The modular battery system is based on vertical and horizontal modularity thanks to independent battery strings connected in parallel, each string comprising hot-swap long life battery packs.

Each battery string has its own independent protection and its own independent switch for fast and safe maintenance.

MODULAR HOT-SWAP BATTERY CABINET		
	Number of strings	Item code

2.2. Electrical characteristics

2.2.1. Electrical characteristics independent of the number of modules

ELECTRICAL CHARACTERISTICS - INPUT	
Rated mains supply voltage (V)	400 V 3-phase+N
Voltage tolerance at full load	340 V to 480 V (+20/-15%)
Voltage tolerance at derated load	up to 240 V @ 50 % of nominal load (linear decrease)
Rated frequency (Hz)	40 - 70Hz
Power factor	> 0.99 ⁽¹⁾
Total harmonic input current distortion (THDi)	≤ 3 % (@: Pn, Resistive load, Mains THDv ≤ 1 %)
Max inrush current at start-up	Power walk-in/ Soft-start (selectable parameters)

(1) Pout ≥ 50 % Sn.

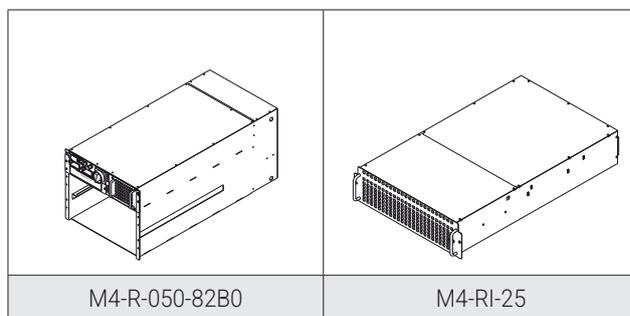

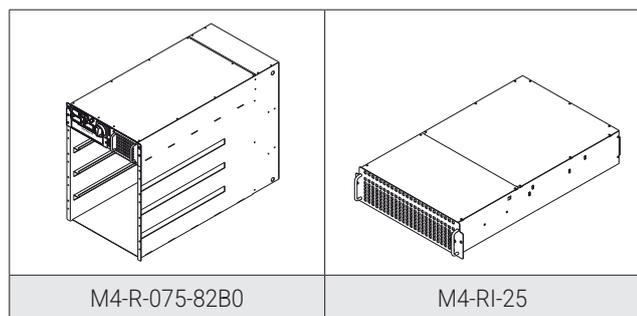

ELECTRICAL CHARACTERISTICS - BYPASS	
Bypass rated voltage (V)	Nominal output voltage ±15% (±20% if GENSET is used)
Bypass rated frequency (Hz)	50 / 60
Bypass frequency tolerance (Hz)	±2 % selectable (±8% if GENSET is used)
Bypass frequency variation speed	50/60 ±10%

ELECTRICAL CHARACTERISTICS - INVERTER	
Rated output voltage (V)	(3ph + N) 380 / 400 / 415 selectable
Output voltage tolerance (Hz)	±1
Rated output frequency (Hz)	50 / 60 (selectable)
Output frequency tolerance	±0.05 % (on battery mode)
Load crest factor	≥ 2.7:1
Total output voltage distortion (THDv)	≤ 1 % (Ph/Ph); ≤ 2 % (Ph/N) (@: Pn, Resistive load)

ELECTRICAL CHARACTERISTICS - STORED ENERGY OPERATING MODE	
Number of battery blocks (VRLA)	From 18+18 to 24+24

ELECTRICAL CHARACTERISTICS - EFFICIENCY	
Efficiency (on-line mode)	up to 96.5%
Efficiency (eco-mode)	up to 99.3%

2.2.2. Electrical characteristics dependent of the number of modules

ELECTRICAL CHARACTERISTICS - INVERTER OVERLOAD

		Number of power modules		
		1	2	3-4
Inverter overload (kW) ⁽¹⁾	10 min	31.2	62.4	94
	5 min	33.3	66.5	100
	1 min	37.5	75.0	113

		Number of power modules	
		1	2
Inverter overload (kW) ⁽¹⁾	10 min	31.2	62.4
	5 min	33.3	66.5
	1 min	37.5	75.0

(1) Initial condition $P_{out} \leq 80\% P_n$.

ELECTRICAL CHARACTERISTICS - INVERTER SHORT-CIRCUIT

		Number of power modules			
		1	2	3	4
Inverter short-circuit (A) $I_{k1} = I_{k2} = I_{k3}$	40 ms	100	200	300	400
	40 to 80 ms	80	160	240	320

		Number of power modules	
		1	2
Inverter short-circuit (A) $I_{k1} = I_{k2} = I_{k3}$	40 ms	100	200
	40 to 80 ms	80	160

ELECTRICAL CHARACTERISTICS - BYPASS OVERLOAD AND SHORT-CIRCUIT

		Number of power modules			
		1	2	3	4
Bypass overload (A)	Nominal	109			
	Continuous	120			
	30 min	136			
	10 min	163			
	1 sec	> 190			
Bypass I^2t (A ² s)		130000			
Bypass Max Peak Current (A)		5000			

		Number of power modules	
		1	2
Bypass overload (A)	Nominal	73	
	Continuous	80	
	30 min	91	
	10 min	109	
	1 sec	> 127	
Bypass I^2t (A ² s)		130000	
Bypass Max Peak Current (A)		5000	

ELECTRICAL CHARACTERISTICS - BATTERY CHARGER MAX CURRENT

		Number of power modules			
		1	2	3	4
Standard max. current (A) M4-RI-25		8	16	24	32
Enhanced battery charger max. current (A) M4-RI-25+CH		16	32	48	64

		Number of power modules	
		1	2
Standard max. current (A) M4-RI-25		8	16
Enhanced battery charger max. current (A) M4-RI-25+CH		16	32

2.3. Recommended protection devices

The installation and system should comply with national plant regulations.

The electrical distribution panel should have a sectioning and protection system installed for input and auxiliary mains.

RECOMMENDED PROTECTION DEVICES - RECTIFIER				
		Number of power modules		
Without redundancy		1	2	3-4
N+1 redundancy		2	3	4
C curve circuit breaker (A)	Min	50	100	160
	Max	160		
Gg fuse (A)	Min	50	100	160
	Max	160		

RECOMMENDED PROTECTION DEVICES - INVERTER			
		Number of power modules	
Without redundancy		1	2
1+1 redundancy		2	-
C curve circuit breaker (A)	Min	50	100
	Max	160	
Gg fuse (A)	Min	50	100
	Max	100	

A circuit breaker switch is recommended with a magnetic tripping threshold of $\geq 10 I_n$ (curve C). A D curve selective breaker should be fitted if an optional external transformer is used.

The minimum value depends on the size of the power cables in the installation, while the maximum value is limited by the UPS cabinet.

The system can accept the max. value of protection, whatever the number of modules installed, in order to allow future scalability, while the min. value depends on the size of the power cables in the installation. A value of protection less than the recommended Max shall be used when the mains network structure cannot support the full power load, and shall be chosen between max. and min. values (as per the table below) according to the mains network design.

Rectifier protection should be taken into account in the event of separate inputs; when the auxiliary mains and rectifier inputs are combined (common input), the general input protection rating should be higher than both (auxiliary mains or rectifier).

RECOMMENDED PROTECTION DEVICES - AUXILIARY MAINS					
		Number of power modules			
		1	2	3	4
C curve circuit breaker (A)	Min	50	100	160	200
	Max	200			
Gg fuse (A)	Min	50	100	160	200
	Max	200			

If an optional external transformer is used, a D curve selective breaker should be used.

Auxiliary mains protection should be taken into account in the event of separate inputs; when the auxiliary mains and rectifier inputs are combined (common input), the general input protection rating should be higher than both (auxiliary mains or rectifier).

RECOMMENDED PROTECTION DEVICES - INPUT RESIDUAL CURRENT CIRCUIT BREAKER					
		Number of power modules			
		1	2	3	4
Input residual current circuit breaker (A)		0.5			

An RCD is not necessary when the UPS is installed in TN-S system. RCDs are not allowed on TN-C systems. If an RCD is required, a B type should be used.

Caution!

Use four-pole selective (S) residual current detectors (RCDs). Load leakage currents are to be added to those generated by the UPS and during transitory phases (power failures and power returns) short current peaks may occur. If loads with high leakage current are present, adjust the residual current protection. It is advisable in all cases to carry out a preliminary check on the earth current leakage with the UPS installed and operating with the definitive load, so as to prevent the sudden activation of the RCD switch.

OUTPUT SELECTIVITY ON BATTERY MODE (AUX MAINS NOT PRESENT)					
		Number of power modules			
		1	2	3	4
B curve circuit breaker (A)		≤ 20	≤ 40	≤ 50	≤ 80
C curve circuit breaker (A)		≤ 10	≤ 20	≤ 25	≤ 40

Selectivity of distribution downstream of UPS with downstream short-circuit (AUX MAINS not present).

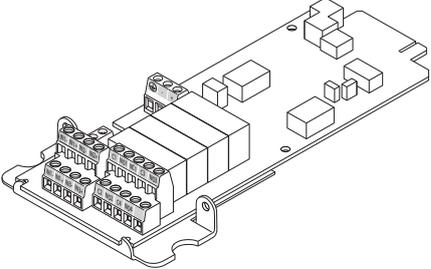

2.4. Communication options

2.4.1. Programmable IN/OUT dry contact card with serial link

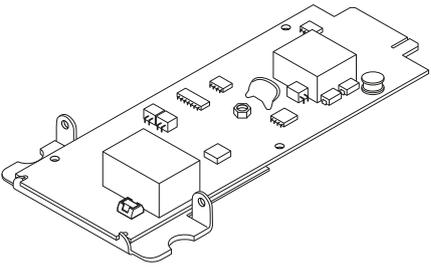

The board is plug&play: the UPS is able to recognize its presence and configuration.

Up to 4 standard operating modes can be selected simply using two jumpers; the selected operating mode manages the ADC outputs and the inputs accordingly.

It is also possible to create a custom operation mode (consult us).

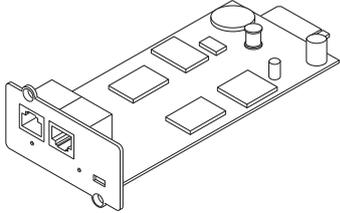

PROGRAMMABLE IN/OUT DRY CONTACT CARD WITH SERIAL LINK	
	
CP-OP-ADC+SL	
<ul style="list-style-type: none"> • 4 relays for external device activation (can be set as normally closed or normally open) 	<ul style="list-style-type: none"> - general alarm, - back-up operation, - bypass operation, - preventive maintenance request.
<ul style="list-style-type: none"> • 3 free inputs to report external contacts to UPS 	<ul style="list-style-type: none"> - emergency stop devices (ESD), - operation with generating set, - battery protection status.
<ul style="list-style-type: none"> • 1 connector for external temperature sensor (optional) • RS485 insulated serial link providing MODBUS RTU protocol • 2 LEDs to display the board status 	

2.4.2. MODBUS TCP card for connection with BMS system

MODBUS TCP – IDA INTERFACE (MODBUS TCP CARD)

CP-OP-MODTCP
<p>Detailed information on the MODBUS protocol serial link or Ethernet network for MODULYS RM GP is available in the Modbus TCP User Manual.</p>

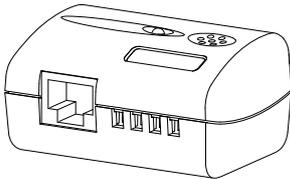

2.4.3. NET VISION card for interface with IT infrastructure

Net Vision is a network adapter for the professional monitoring and remote control of MODULYS RM GP. The Net Vision network adaptor allows the UPS to be connected directly to the Ethernet network allowing secure management of the UPS over the network using a web browser, a TELNET interface or NMS application via SNMP. The protocols used for connection are independent of the platform and operating system, therefore Net Vision is extremely flexible and suitable for all systems. In addition to monitoring and control, the Net Vision interface is able to provide a high level of protection for servers powered by the UPS. In critical conditions, up to 250 devices powered by the UPS can be switched off in an orderly sequence whilst ensuring data integrity. The remote shutdown is provided by a client shutdown to be installed on all computers that require this automatic function. Some clients for Net Vision are native to certain operating systems, otherwise a universal shutdown client (JNC) can be used.

NET VISION

NET-VISIONxCARD
<ul style="list-style-type: none"> • NET VISION FUNCTIONS • UPS monitoring via HTML pages and synoptic • UPS control • UPS event notification via email • SNMP TRAP notification to NMS system (NET VISION and RFC1628 TRAP from version 6.1 and above) • Server Shutdown (using JNC and VIRTUAL-JNC software agent on servers) • Events and measurements log • Multi-language capabilities

2.4.4. EMD (Environment Monitoring Device)

The EMD monitors temperature, humidity and other conditions in the room’s environment and also offers 2 digital input connections for external dry contacts to monitor water, fire and smoke security alarms. All information is processed by MODULYS RM GP for a complete monitoring of external conditions and alarms. Easy connection to Net Vision card using standard CAT5 cables with straight through wiring.

EMD (ENVIRONMENT MONITORING DEVICE)

Net Vision EMD
<p>EMD FUNCTIONS</p> <ul style="list-style-type: none"> • External temperature monitoring • External humidity monitoring • 2 digital input connections for external dry contacts (for instance to monitor security alarms like fire, smoke, etc.)

2.4.5. External Temperature Sensor

The temperature sensor can be used to monitor the battery temperature should the battery cabinet be provided by another supplier by Socomec (all battery cabinets provided by Socomec are fitted with the temperature sensor as standard). The sensor should be connected to the ADC-SL board, using the relative connector. MODULYS RM GP uses the temperature measured by this sensor to correctly set the battery charge profile.

3. REFERENCE STANDARDS AND DIRECTIVES

3.1. Overview

The construction of the equipment and choice of materials and components comply with all laws, decrees, directives and standards currently in force. In particular, the equipment is fully compliant with all European Directives concerning CE marking.

2006 / 95 / EC

Council Directive 2006 / 95 / EC, dated 16 February 2007, on the reconciliation of legislation within Member States regarding electrical materials for use within specific voltage ranges.

2004 / 108 / EC

On the approximation of the laws of the Member States relating to electromagnetic compatibility.

3.2. Standards - Tests, verifications and certifications

STANDARDS		
Safety	IEC 62040-1	
EMC	IEC 62040-2 (C2)	
Performance ⁽¹⁾	IEC 62040-3 (VFI-SS-111)	
Power module efficiency ⁽²⁾	IEC 62040-3	up to 96,5%
Power module MTBF ⁽³⁾	IEC 62380	1.000.000 h
Degree of protection	IEC 60529	IP20
Product certification	CE	

(1) EMC performances are tested and verified by CREI VEN.
 (2) Power module efficiency is tested and verified by TÜV SÜD.
 (3) Power Module MTBF is calculated and tested by SERMA ELECTRONICS.

ELITE UPS: a mark of efficiency

Socomec, as CEMEP UPS manufacturer member, has signed a Code of Conduct put forward by the Joint Research Centre of the European Commission (JRC), to ensure the protection of critical applications and processes ensuring 24/7 continuous high quality supply. The JRC commits to mitigating energy losses and gas emissions caused by UPS equipment, therefore maximising UPS efficiency.
